

► **Shape your future with wpd wind power!**
Work to change the world with renewable energy.

Future energy production will be carbon dioxide free all around the world including Finland. Wind power is a major contributor to achieve this target.

The wpd group actively takes part in shaping this change with about 2000 employees around the world. We have become a major player in over 18 different countries by specializing in planning, financing, constructing and operating of wind parks.

In Finland wpd have constructed three wind farms with combined output over 140 MW, this equals over 20 000 houses' annual electricity consumption. In addition, wpd Finland is one of the first companies to realize subsidy free wind farm construction in 2018 with a project of around 60 MW. More than 10 other Finnish wind farms are under development.

With respect to our business activities in Finland we are searching for a

Project developer for wind farm site identification and development, contract handling and authority discussions about our wind energy projects in Finland.

Your tasks

You will be a member of our wind farm development team. Work includes site identification and development of new wind farms with the aid of WindPro and GIS software. You will be drafting/handling different kind of contracts and take part in the contract negotiations. Additionally you will be involved in several stakeholder meetings from regional and municipal authorities to land owners and local residents. You will work closely with our project managers in different stages of the projects. You will be located in our Espoo office.

Your profile

We are looking for the right type of personality. We are setting high standards, but are not demanding any specific educational qualification or professional experience. Please apply if you are confident that your profile matches the following points:

- You have the natural ability to create personal relationships and maintain them with a variety of personalities
- You are eager and motivated to learn the software skills that are needed
- You have a sense of emotional intelligence
- You can lead conversations and negotiations towards set goals
- You are interested in the legal aspects of contracts and permitting processes
- You are positive minded
- You can work independently, but are still a team player
- Your proficiency in Finnish is flawless and you can communicate fluently in English
- Understanding of EIA, land-use planning and related regulatory proceedings can be beneficial

We offer ...

- front row seat at the energy transition of the Finnish electricity market to protect the climate
- training on the job which will allow you to acquire the necessary skillsets
- support and expertise of one of the biggest European companies in the field of wind project development
- integration into a very motivated and positive spirited team.
- work place where no following day is a like

We are looking forward to your application with salary proposal and your CV by
December 31st, 2018.

Please send your application to: [info\(at\)wpd.fi](mailto:info(at)wpd.fi)
